SUBJECT: Mosquito Control Contract for 2022 and 2023

DATE: December 22, 2021

The Public Works & Environmental Concerns Committee and Staff recommend that the Board of Trustees approve a renewed contract for 2022 and 2023 with Clarke Environmental Mosquito Management. The contract includes an option to extend for 2024.

Background:

Clark is holding their price for both years at \$68,280 per year, which is the same price for 2020 and 2021. This price had been reduced from the long-held prior price of 88,710 due to the elimination of backyard catch basin treatments and community event spraying. The following services would remain unchanged from the 2020-2021 contract:

- Three larval site inspections and the subsequent larvicide application for 192 sites,
- Five additional targeted inspection of 74 known breeding sites,
- Three targeted late-season inspections of 63 known Culex mosquito breeding sites,
- One 180-day larvicide application in 4,320 street catch basins,
- Three pre-hatch applications by helicopter of 60 acres of standing water sites, and
- A phone hotline for residents.

The control program will continue with pre-hatch and larvicide treatments. Pre-hatch and larvicide applications are highly effective against Culex mosquitoes, which is the species that carries the West Nile Virus (WNV). Aedes (floodwater) mosquitoes do not carry WNV and they breed in open water as well as damp areas. Traps have been collecting both Culex and Aedes mosquitoes.

Adulticide treatment (spraying) is not very effective or efficient in managing either Culex or Aedes mosquitoes except for short-term relief. The cost for additional spraying by trucks on all Village streets would be an extra \$80/mile of treatment. Given that we have 154 miles of streets per GIS, each Village-wide application would cost \$12,320. This would only be used if necessary for temporary treatment of isolated areas that may be problematic due to localized flooding over an extended time.

Our contract specifies the continued use of the environmentally responsible larvicide called Natular that is derived from a soil bacterium. Deliveries by bicycle and on foot are other unique aspects of Clarke's sustainable and quiet service program. The hotline handled 82 calls in 2021.

Recommendation:

Staff has been very satisfied with Clarke's customer service, their surveillance of open waters by their in-house helicopter service, and their willingness to hold prices. As such, please forward the contract for approval by the Board of Trustees.
